

## April 2024 Newsletter

### It's That Time of Year Again...

Happy (Northern Hemisphere) spring, everyone!

As the flower bloom in the soil, so too do session ideas for this year's AGU Annual Meeting bloom in our heads. And this year, we of the Planetary Sciences Section Executive Committee are trying something new.

Usually, members of the community come up with session ideas and submit them individually or with a small group of co-conveners, but there's (usually) very little or no coordination between people or teams regarding what session themes are proposed—or what aren't proposed.

So this year, we're inviting you to tell us what session(s) you're proposing.

We'll collate that information, keeping it in confidence, but this way we'll be able to see if there are session topics that haven't yet been proposed so we can work to fill that gap. And, if there are multiple session proposals on the same topic, we can help the proposing conveners to coordinate or combine their efforts.

You are not obligated to share your session proposal plans with us! But if you choose to do so, you'll be helping us determine whether this kind of coordination is a good idea for our Section going forward.

AGU Annual Meeting session proposals are due Wednesday, 24 April 2024 (23:59 EDT/03:59 +1 GMT). You can find all the info you need here:

As always, if you have questions, concerns, or comments, don't hesitate to reach out at [paul.byrne@wustl.edu](mailto:paul.byrne@wustl.edu). And if you have any deadlines, events, or announcements you would like to share, please email Sarah Hörst at [sarah.horst@jhu.edu](mailto:sarah.horst@jhu.edu).

## **(1) AGU Planetary Data Training Workshop, 21-24 May 2024, Arizona State University**

This **in-person only workshop** is designed to provide an introduction into using planetary spatial data in Geographic Information Systems (GIS) software, with a focus on studies of terrestrial planet and icy satellite surface research. The workshop will include a combination of lectures, demonstrations, and hands-on exercises with the software. Computer work stations will be provided by ASU, or you may bring your own laptop.

**Topics will include:** JMARS (**Day 1**), ArcGIS Pro (**Day 2**), ISIS3 for image processing (**Day 3 morning**), Planetary Data Management and an introduction to NASA's Planetary Data System (**Day 3 afternoon**), and Structure-from-Motion as an introduction to stereo photogrammetry and digital elevation model production (**Day 4, demos only**). The instructors of each of these activities are experts in their respective fields, some of which were staff of the former NASA Regional Planetary Information Facilities (RPIFs), and have years of experience in the use of digital planetary data for research.

This workshop is offered by the Planetary Data Training program, funded through NASA's Topical Workshops, Symposia, and Conferences (TWSC), and is facilitated by the Ronald Greeley Center for Planetary Studies, School of Earth and Space Exploration, Arizona State University, Tempe, Arizona.

Two \$2000 travel grants are offered to promote attendance from groups that are underrepresented in planetary science and STEM.

**Travel Grant applications due 17 April 2024.**

## **(2) Comment on AGU position statements on climate change, science communication and data**

AGU members have until 30 April to comment on revisions to three AGU position statements addressing climate change, science communication and data, respectively. Position statements are what enable AGU to provide scientific expertise on significant policy issues.

**Submit your comments to help shape the future of the Earth and space sciences.**
